

## Crimping Applicator with Bending Unit

### Description

Quick-change applicator for crimping terminals in Schaefer crimp machines. If designed accordingly they can also be used with Schaefer stripping modules. This type of applicator bends terminals to the desired geometry before or during the crimping process.

The advantage of this process is it allows a reel of unbent terminals, which generally contain many more terminals on one reel, to be used; thus minimizing downtimes due to frequent reel replacements. Unbent terminals also take up less storage capacity.

This applicator is designed with an indexed rotary head for reproducible, independent crimp height adjustment of both the wire and insulation.

### Range of Application

Schaefer crimping applicators are used in the series production of the cable processing industry.

### Examples of use

The applicator with bending module is available for usual and specific crimp machines.

## Sales and Service for Turkey

### **SAFF Makine Sanayi ve Dis Ticaret Ltd. Sti.**

Akcaburgaz Mevkii Alkop Sanayi Sitesi A-6 Blok No:20

Esenyurt - Istanbul
