Crimp System for Wires with Sheathing (I)

Description

The EPS 2001-based crimping system has been developed for crimping an HF punch-bend contact onto the inner conductor of an HF wire.

The paper take-up reel and a slack control system ensure tension-free contact feed. After preparing the wire it is stripped by a centrically closing stripper with a zero cut module. The HF inner conductor is crimped to the contact by the crimping tool.

Examples of use

This system is especially suited for the rational crimping of contacts on the inner conductors of HF wires.

Product Combination Possibilities

A crimp quality control monitor is an available option.
